

Non-Sparking Drum Wrench

This non-sparking drum wrench has an offset design and is made of bronze alloy. The 12" long handle provides maximum leverage.

Universal Funnel and Cover

Fits both closed-head and open-head 55-gallon drums, and other containers. Just set it and forget it. Designed with high side wall and bung fitting holders. Add the optional lockable cover for added protection and value! The cover is a snap to install with all necessary hardware and instructions included.

Plugs and Flanges.

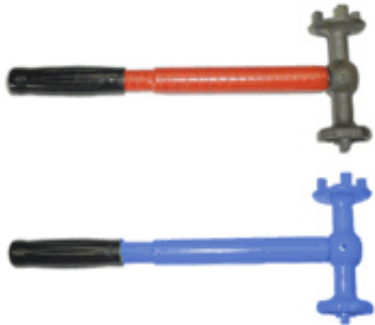

Tite-Seal octagon flanges and round plugs meet all U.S. DOT and U.N. standards and are completely interchangeable with other similar brands of drum closures. Standard Tite-Seal closures are electroplated with bright zinc and yellow passivated against corrosion. A variety of gaskets are available including Buna, EPDM, Polyirradiated, Teflon and Viton. Tite-Seal flanges can be installed with industry standard insertion dies or with die sets which can be provided upon request.

Leak Lock System for Reconditioned Drums

The Leak Lock system is a two piece system which is used when the octagon flange gasket has been incinerated during the burning operation of the reconditioning process. This plug replaces the traditional three piece system that uses a gasket, retaining ring, and hexagon plug. This system is the simplest and most effective on the market to prevent flange leakage.

Drum Flange & Plug Gaskets

We carry them in both sizes 2" and 3/4" for the TYPE 1 plugs. Among the drum flange gaskets we offer are Black Buna, EPDM and Poly-irradiated made with the finest material in the market. Viton, Teflon and Neoprene are also available. We also carry some drum flange gaskets for the TYPE 1 Flanges. Poly Plug Drum Flange Gaskets and EPDM seal gaskets for Poly Plugs. These gaskets are for Poly Plugs used on the poly or plastic drums.
